

Service Line Inventory Project

Overview

The United States Environmental Protection Agency (EPA) published the Lead and Copper Rule Revisions (LCRR) in January 2021. These revisions to the Lead and Copper Rule require all community water systems to submit a service line inventory to the Pennsylvania Department of Environmental Protection by October 16, 2024. To meet EPA and DEP requirements, the borough is currently in the process of identifying the material of all service lines that are connected to its water system.

What is a Service Line

Service lines are pipes that branch from the borough's water mains and supply water into your home. The borough owns and maintains the water mains as well as the first portion of the service line, starting at the water main and extending to the curb stop. You own and are responsible for the portion of the service line beginning at the curb stop and extending into your home. Your service line could be constructed from lead, copper, galvanized steel, or plastic. The year your home was built could be an indicator of what material your service line is constructed of.

What We Are Asking

The borough is asking for the assistance of all customers to identify the service line material entering their homes. This portion of pipe usually is before your water meter, which is typically located in the basement of your home, either protruding through the floor or wall. **We ask that you identify the material of this portion of the pipe, take a picture displaying this portion of the pipe, complete survey on the back of this form and submit form and photo according to the directions at the bottom of survey.** In doing so, this alleviates the burden of borough employees inspecting each customer's service line. In the coming months, the borough is tasked with identifying and documenting the pipe material of its portion of the service line, which is a monumental task. If we receive the support of the community in completing this short survey, it will help the borough meet the deadline for the Service Line Inventory requirements. The borough appreciates your support.

Lead

A dull, silver-gray color that is easily scratched with a coin. Use a magnet - strong magnets will *not* cling to lead pipes.

Galvanized

A dull, silver-gray color. Use a magnet - strong magnets will typically cling to galvanized pipes.

Copper

The color of a copper penny.

Plastic

White, rigid pipe.

Service Line Inventory Customer Survey

Property Address: _____

Year the house was built: _____

Please answer each of the following questions by checking one of the boxes provided.

1. This residence is a Single family residence Multi Family Residence
 building/other _____ School Childcare Facility

2. Interior building plumbing contains lead solder Yes No Not sure

3. Customer-Owned portion of service line

Material: Lead Galvanized Steel Plastic Copper Not sure

Other (please specify) _____

Pipe Size: ½ inch ¾ Inch 1 inch Not Sure

Other (please specify) _____

Has your service line previously contained lead? Yes No Not sure

Date of service line installation (answer one of the following):

exact Date: _____ approximate Date _____

4. System-owned portion (please only answer if you have knowledge of this)

Material: Lead Galvanized Steel Plastic Copper Not sure

Other (please specify) _____

Pipe size: ½ inch ¾ Inch 1 inch Not Sure

Other (please specify) _____

Has your service line previously contained lead? Yes No Not sure

Date of service line installation (answer one of the following):

exact Date: _____ approximate Date _____

**Please Return the completed survey and photo no later than February 29, 2024 to Christiana Borough at 10
W. Slokom Avenue Christiana, PA 17509 or mail to P.O. Box 135 Christiana, PA 17509 or
email to: christianawater@comcast.net**
